

Mobility

Security and functionality

Mobility, why now?

- Continued rise of agile working
- Expectations on businesses to provide customers with high availability access to people and services
- Improved home technology, enabling workforces to no longer be restricted to office locations

The Problem

The need for a secure and consistent user experience for everyone everywhere is further complicated by advancements in home and personal technology. This has led to high expectations on business technology to be easy to use and always available. Businesses are faced with rising demands on ICT time, resources and money needed to retain control without hindering productivity.

The Challenges

Agile working continues to rise and on average users carry 3 - 5 devices each. The challenges are not just about how to best connect the users but also how to manage them once they are connected.

Demonstrating measurable ROI from mobile strategy investments can be complex whilst ensuring security compliance is met and workforce productivity remains high, both in and out of the office. This quite often falls back to the status quo of organisations paying higher than needed operating costs.

Real World Scenarios

- Contractual agility
- Self service portal and Billing
- Mobile Security
- Carrier/Supplier relationship
- Effective cost management
- Ecosystem integration

Where we fit

C-STEM are one of only 12 Systems Integrators and Outsourcers (SI&O) EE Partners across the UK and are the only partner within the EE Corporate to have 100% of our customers re-signing with us each time their contracts are due for renewal.

The development of agile, bespoke and robust mobility solutions, to support current and future needs is an essential ingredient to the success of a mobile strategy and optimised user productivity. Our SI&O status combined with our expertise and pedigree in security and Wi-Fi, ensures our customers know their mobility needs are met and in safe hands.

The right mobile solutions, on the right mobile network

The Solution

CloudSMART Mobility from C-STEM powered by EE

- ✓ 30 Day cancellations - contractual agility
- ✓ Super secure at device, application and data level
- ✓ Self service mobility portal
- ✓ Bespoke voice and aggregated data packages
- ✓ Mobile integration to internal and external ecosystems
- ✓ 4G and Wi-Fi calling

Mobile Security

Compliance, secure connectivity and the monitoring of managed/unmanaged mobile devices has become a key responsibility for ICT management teams.

By integrating the strengths of a sophisticated array of tools, organisations can access real time insights on the security and status for each user at 3 levels; device, application and data. This enhanced functionality across the levels means organisations are now better placed to make informed decisions, confidently taking the necessary actions.
