

GREAT RECEPTION WHEREVER YOU NEED IT

A great signal, right across your site

No other network is bigger, faster or more reliable, so let EE help your business to become better connected whether you're working indoors or out.

Even if some of your buildings can't get a great signal right now, we can survey your entire premises and deliver reliable coverage, right across your site.

GREAT COVERAGE FROM THE START

No mobile network can reach every nook and cranny of every building – concrete, bricks, steel and even the metal oxide coating on low-E glass can all block radio waves. But if your office does need a boost, we can make sure you get the right kit for the job.

Get the coverage your business needs

1. Tell us where you do business

Whether it's a big HQ, a number of smaller offices, or even your employees' home offices, with a list of postcodes we can check our coverage levels and see if any of these need closer inspection.

Where coverage is good, we can offer an upfront trial of EE devices to give you complete peace of mind. For anywhere else, we can offer the right coverage solution.

2. Tell us what you need

Whether it's ten or ten thousand people, using voice or mobile data, we can match our signal boosting equipment to the services and devices your staff need.

The sooner we know your buildings, numbers of users and the technologies you need us to support, we can build exactly the right solution into your plan.

3. Take coverage as a given

Our network experts can survey your site and recommend the hardware that provides the signal, speed and network capacity for your staff to be at their most productive, anywhere in your office.

We've got everyone covered

By checking all your buildings up front, we can build these solutions into your plan. So there's no disruption. No surprise costs. Just fast, reliable, comprehensive coverage when you move to EE, right across your site that can change the way your people work.

We want to know your coverage requirements before any contracts are signed. So if you're at all concerned about signal quality, we can chat about that up front.

The more you can tell us, the sooner we can help

Once we know about your buildings, users volumes and technology needs, we'll be able to build the right solution and structure any costs into your plan.

For people who live in buildings where reception isn't as good as it should be, we can even help you pick handsets that support home coverage solutions like Signal Box and WiFi Calling, so that home coverage problems can become a thing of the past.

To talk to us about our coverage solutions, please contact your sales account manager or one of our business specialists.
